

## MACHINE TYPE 150 CHARACTERISTICS

## Since 1961,

The date of Mr. Louis DUBUIT's patent, more than $\mathbf{1 0 , 0 0 0}$ universal machines
Type 150 have been sold making it a standard in the printing industry.

The basic movements remain the same, each new device has been integrated in the basic Machine giving its extra possibilities. It is this continuous innovation which makes the original Machine DUBUIT 150 the leader in its market.

VARIOUS OBJECTS

## OVAL DEVICE

The oval object is put on a support which rotates around the center of the radius of the curve of the surface to be printed.

## ALL AROUND OVAL DEVICE

The objects to be printed are mounted onto a support (mandrel or chuck and counterpoint) that is vertically movable. During printing the squeegee moves and follows the shape of the object.

## CHUCK \& COUNTERPOINT INFLATING DEVICE

To print soft bottles, it is necessary to inflate them. The bottles is held between a chuck and the counterpoint with air being injected through the cone. The chuck is driven by a gear and rack rotating the inflated bottle.

## PRINTING WITH SLIDING TABLE

This attachment makes the positioning of an object onto a vacumm table easy. It is made with a sliding table which allows the item to be loaded outside the screen area.

## CONICAL DEVICE

For printing multicolored or printing that needs to keep perspective the conical attachments allows correction for tapered objects. The screen is synchronized to print around the conical object.

| POWER | 0.4 | kW |
| :--- | :---: | :--- |
| PRINT SIZE |  |  |
| Min.Length | 10 | mm |
| Max. Length | 300 | mm |
| Max. Width | 250 | mm |
| OBJECT DIAMETER (MAX.) |  |  |
| Standard | 100 | mm |
| With double stroke attachment | 200 | mm |
| With triple stroke attachment | 300 | mm |
| OUTPUT | $1000-2500 / \mathrm{h}$ <br> (depending on operator skills) |  |
| OPERATION AIR PRESSURE | 6 | bars |
